Profiles and Distribution

- Records are distributed according to a monthly schedule, covering the previous month's produced records.
- Typically, libraries ask that files be divided by format or by changed or new records.
- Participants can choose among 4 record distribution options
- Participants are allowed to make two cataloging specification changes in a year.
- Item profiles are updated monthly through GPO's Item Lister.

CATALOGING RECORD DISTRIBUTION PROJECT

GPO and MARCIVE, Inc

MARCIVE Subscription Service

*includes Cataloging Record Distribution Project options plus more

What do I need to know about the “record loader”?	<i>A record loader contains the technical specifications that your library submits so that the bibliographic records display the way you want them to in your OPAC. It is a one-time only activity. Options are listed below.</i>	
	Auto-creation of library holding fields	Extensive customization of holdings data
	Pre-set 4 holdings codes	No limit on number of holding codes
		Acquire authority record files and update of previously distributed authority records Extensive customization of MARC tags for local needs
How do the bibliographic files work?	<i>Bibliographic files (AKA ‘output files’) are the bulk file of bibliographic records that actually get loaded into your OPAC. Bibliographic files are made available to libraries via FTP. There are several ways that libraries can configure their bibliographic files to their needs.</i>	
	Specify that files be divided by publication format for loading in the OPAC	Extensive customization of files
	Two changes to file specifications per year	Unlimited changes to file specifications
	Automatic update to CRDP profile for newly added and dropped item numbers, pulled from GPO’s Item List	Customer MARCIVE item profile is updated on demand, not automatically
What comes with bibliographic record files?		Weekly shipping list file of brief bibliographic records
	Monthly file of full bibliographic records	
		Extensive checks to raw data prior to processing (e.g. make certain item number and SuDoc stem match)
What are some bibliographic record profile options?	Files are based on library’s GPO item selection profile and/or profile options listed below	
	Acquire all bibliographic records that match GPO item selection profile	
	Acquire GPO’s Historic Shelflist records	
	Acquire or exclude bibliographic records by publication format that match GPO item selection profile, e.g. exclude serials	
What are some additional work saving options available through MARCIVE subscription services?	Acquire all bibliographic records with a MARC 856 PURL (online-only records) that match GPO item selection profile	De-duplicated file of all records with PURLs, in addition to what library selects through their GPO item selection profile
		Smart barcode creation & labels
		List of bibliographic records supplied in electronic format to aid in review of records
What are the differences in pricing?		Set specified holdings in OCLC
	Services provided at no cost to the library	Pricing is tiered, based on size of item number profile, plus options selected
		Discounts of other MARCIVE GPO services Consortium record output/pricing

*All customers benefit from customer service via phone, email, & fax Monday – Friday 8 am – 5 pm (CST)
