LSCM Digitization Overview

LSCM began digital imaging works of the U.S. Government in 2016 with the objective of increasing public access to historic Federal Government information by making it available digitally on GovInfo, and ultimately to make the entire National Collection of U.S. Government Information available digitally.

GPO's System of Online Access Collection Development Plan guides GovInfo content addition to make it the "most comprehensive information repository serving the information needs of Congress, Federal agencies, and the public." LSCM reevaluates the Plan's deliberate priority setting and planned collecting activities and goals annually and pursues both contractor-based and partnership-based digitization projects.

You can learn more details about LSCM digitization on FDLP.gov.

Ongoing Efforts

FY24
- Continue to collaborate with the Law Library of Congress to make more digitized Serial Set volumes available on GovInfo.
- Complete the development of the digitized Statutes at Large collection on GovInfo and make the digitized volumes available.
- Complete the digitization of the miscellaneous documents contract awarded in FY23.
- Complete the digitization of the U.S. Reports.
- Add more Congressional hearings and prints to GovInfo.

FY25
- Continue to collaborate with the Law Library of Congress to make more digitized Serial Set volumes available on GovInfo.
- Complete the development of the digitized U.S. Reports collection on GovInfo and make the digitized volumes available.
- Ongoing digitization of Congressional hearings.
- Digitization of additional depository shipping list, executive agency annual reports, and independent commission material.
