“The purpose of anthropology
is to make the world safe
for human differences.”

Ruth Benedict
The Chrysanthemum and the Sword

Anthropology is divided into three primary fields: biological or physical anthropology, cultural or social anthropology, and linguistic anthropology. Biological and physical anthropologists study the changing nature of the biology of humans and closely related primates. Cultural anthropologists study the social and cultural consequences of various human-related issues, such as overpopulation, natural disasters, warfare, and poverty. Linguistic anthropology studies the history and development of languages.

What Is Cultural Anthropology?

Anthropology is the scientific study of humans and their cultural, social, biological, and environmental aspects of life in the past and the present. Cultural anthropology is one of four areas of study in the broader field of anthropology (archeology, physical or biological anthropology, and linguistics being the other three). Cultural anthropologists specialize in the study of culture and peoples'

A pair of scales of justice is centered in the background, slightly out of focus. The scales are made of a light-colored metal, possibly silver or chrome, and are suspended from a central point. The background is a warm, blurred mix of orange, yellow, and brown tones, suggesting an indoor setting with soft lighting. The text 'POLITICAL SCIENCE' is overlaid in a large, black, serif font, centered horizontally and vertically.

POLITICAL
SCIENCE

Political science, the systematic study of governance by the application of empirical and generally scientific methods of analysis. As traditionally defined and studied, political science examines the state and its organs and institutions. The contemporary discipline, however, is considerably broader than this, encompassing studies of all the societal, cultural, and psychological factors that mutually influence the operation of government and the body politic.

What Political Scientists Do

Political scientists study the origin, development, and operation of political systems. They research political ideas and analyze governments, policies, political trends, and related issues.

- Research political subjects, such as the U.S. political system and foreign relations
- Collect and analyze data from sources such as public opinion surveys
- Develop and test political theories
- Evaluate the effects of policies and laws on government, businesses, and people
- Monitor current events, policy decisions, and other related issues
- Forecast political, economic, and social trends
- Submit research results by giving presentations and publishing articles
