Global information on Aging

https://www.un.org/en/development/desa/population/publications/pdf/ageing/WPA2017_Highlights.pdf

Growth in the number of older persons is a global phenomenon: it is expected that between 2017 and 2050, virtually every country in the world will experience a substantial increase in the size of the population aged 60 years or over

Since 1950-1955, life expectancy at birth has risen by more than 10 years in Northern America, Europe and Oceania, and by close to 25 years in Latin America and the Caribbean

Global information on Aging

<https://www.nia.nih.gov/sites/default/files/2017-06/WPAM.pdf>

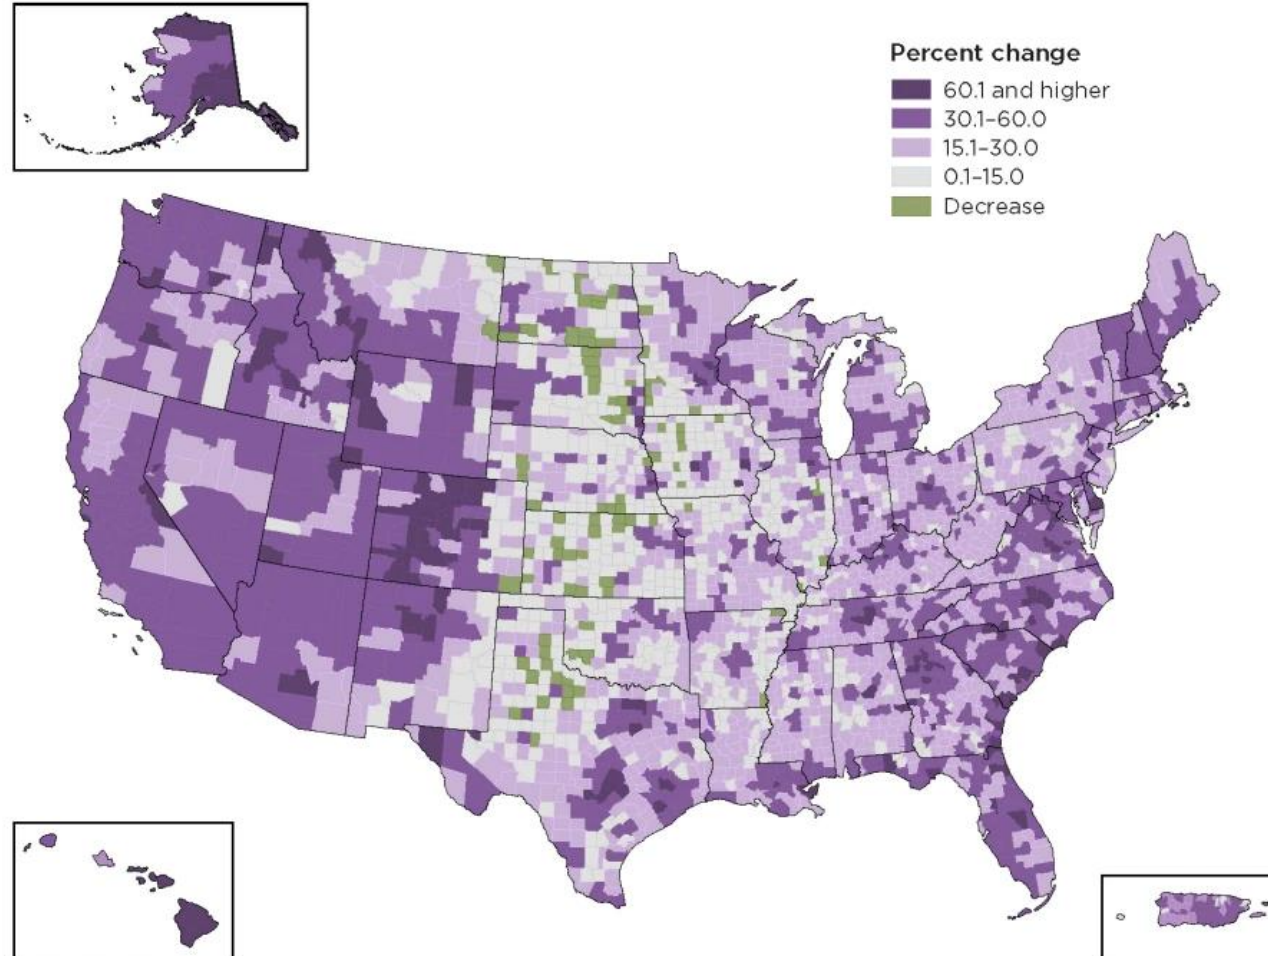

We are aging—not just as individuals or communities but as a world. In 2006, almost 500 million people worldwide were 65 and older. By 2030, that total is projected to increase to 1 billion—1 in every 8 of the earth’s inhabitants. Significantly, the most rapid increases in the 65-and-older population are occurring in developing countries, which will see a jump of 140 percent by 2030

An important feature of population aging is the progressive aging of the older population itself. Over time, more older people survive to even more advanced ages. For research and policy purposes, it is useful to distinguish between the old and the oldest old, often defined as people age 85 and over.

Older and Growing

Percent Change among the 65 and Older Population: 2010 to 2019

Aging in the United States

More than 10,000 people turn 65 every day in the United States.

<https://www.hhs.gov/aging/index.html>

<https://www.census.gov/library/publications/2018/acs/acs-38.html>

The 2016 ACS estimated the number of people in the United States aged 65 and over as 49.2 million. Of them, more than half (28.7 million or 58 percent) were aged 65 to 74. The 75 to 84 age group share of the older population was around 14.3 million or 29 percent— more than double the number and proportion (6.3 million or 13 percent) for those 85 and older

The proportions of older men (16 percent) and women (17 percent) that did not complete high school were significantly higher than men (13 percent) and women (12 percent) aged 25 and older (Figure 8). It was highest for the 85 and older group, in which 24 percent of men and 25 percent of women were not high school graduates.

The Population 65 Years and Older in the United States

Over one-third each of all male and female grandparents aged 30 and older were caregivers for their coresident grandchildren

Across all older ages, men were more likely to be caregivers for their coresident grandchildren.

A Changing Nation: Population Projections Under Alternative Immigration Scenarios

Population Estimates and Projections

Current Population Reports

By Sandra Johnson
P25-1146
Issued February 2020

INTRODUCTION

Higher international immigration over the next four decades would produce a faster growing, more diverse, and younger population for the United States. In contrast, an absence of migration into the country over this same period would result in a U.S. population that is smaller than the present. Different levels of immigration between now and 2060 could change the projection of the population in that year by as much as 127 million people, with estimates ranging anywhere from 320 to 447 million U.S. residents.

the population aged 65 and older exceeds the share of the population under the age of 18. The timing of this shift, however, will vary depending on the amount of immigration that occurs. High immigration levels will delay this milestone more than a decade relative to scenarios with lower levels of migration.

The 2017 National Projections main series, released in September 2018, present one scenario for the future population.¹ These projections will only hold true if the assumptions about births, deaths, and migration match the actual trends in these components of

Population aging refers to the relatively faster growth of the older population compared to the younger population and the resultant shifts in the age distribution of the population toward older ages. Population aging is commonly measured as an increasing median age or a rising share of the population above a certain age, such as 65.

All Census Bureau demographic surveys and the decennial census collect information about the U.S. older population. Other countries also collect data on the older population through household-based surveys and population and housing censuses.

This section includes data and publications on population aging in both the United States and the world as well as information on older population's characteristics

A Public Health Priority

The health of caregivers is at risk.

Informal or unpaid caregivers (family members or friends) are the backbone of long-term care provided in people's homes. While some aspects of caregiving may be rewarding, caregivers can also be at increased risk for negative health consequences. These may include stress, depression, difficulty maintaining a healthy

Prestar cuidados

[English \(US\)](#)

Prioridad para la salud pública

La salud de los cuidadores está en riesgo. Los cuidadores informales o no remunerados (como familiares o amigos) son el pilar de los cuidados a largo plazo proporcionados en la casa de las personas. Si bien algunos aspectos de la prestación de cuidados pueden ser gratificantes, los cuidadores también pueden estar en mayor riesgo de tener consecuencias negativas para la salud. Estas podrían incluir estrés, depresión, dificultad para mantener un estilo de vida saludable y mantenerse al día con los servicios clínicos.

NIA (National institute on Aging)

NETWORK FOR DATA-INTENSIVE RESEARCH ON AGING

The Network for Data-Intensive Research on Aging (NDIRA) will support an emerging interdisciplinary community of scientists using novel collections of cross-sectional, longitudinal, and contextual data for research on population aging. NDIRA will bring established scholars of aging together with scholars new to the field and introduce them to data that are fundamental to understanding health outcomes at older ages. By fostering communication and collaboration, as well as providing hands-on assistance in data management and analysis, we will contribute to both the talent pool and the data resource pool for addressing the demography and economics of aging.
