from Scott Matheson to everyone:
(The NARA site is spcific to NHD)

from Kate Pitcher to everyone:
Question was for Jen and Katie too!

from Jenny Groome to everyone:
Issue - current culture makes it hard to address certain topics without pushback from some groups.

from Aimee Quinn to everyone:
@Mary, I love that you have Joann Myers TedX video on your P-16 site. It is a lovely site. Thank you for
sharing.

from Angela Bonnell to everyone:
Thank you for a great session!!

from Andrea Stelljes to everyone:
Thank you!

from Lori Driver to everyone:
Thank you, that was great!!

from Scott Matheson to everyone:
Thanks for great ideas and resources....!

from Kate Pitcher to everyone:
Thank you all -- EXCELLENT !

from Jen Kirk to everyone:
Thanks to all our co-presenters!

from Mary Bangert to everyone:
Thank you!

from Aimee Quinn to everyone:
Thank you for a wonderful presentation. Powerful information.

Does it appear that many of the agencies have already updated their policies to reflect the Nelson memo at this point?

from Mark Ames to everyone:
With greater access to data has there been a greater commitment by agencies to keeping data available permanently?

from David Isaak to everyone:
When I would teach ICPSR, I would call it the "cadillac of data repositories" given the metadata and data normalization.

from James Jacobs to everyone:
I like that description!

from Mark Ames to everyone:
@lynda Thanks

from Sarah Dobransky to everyone:
I may have missed this (came in late), but is there any further encouragement for state and local agencies to lend their work to the federal government? Data.gov has a lot, and it would be great to see more being pulled in.

from Bruce Pencek to everyone:
Data discovery is a constant vexation even for well-curated data. What can the docs, repository, and researcher communities learn from one another about discovery in a larger, wilder open-data world?

from Joshua Olsen to everyone:
Hopefully I didn't miss this but, is there a standardized syntax that facilitates interoperability in the data ecosystem? For example, JSON fetched through an API.

from Shari Laster to everyone:
Sarah, good question. The current scope for Data.gov is for federal agencies only. Per their homepage: "Data.gov is the United States government's open data website. It provides access to datasets published by agencies across the federal government. Data.gov is intended to provide access to government open data to the public, achieve agency missions, drive innovation, fuel economic activity, and uphold the ideals of an open and transparent government."

from jim kammerer to everyone:
Is anyone aware of any discussion among govt doc librarians regarding the Pfizer vaccine trial data of 329,000 pages held by FDA and not expected to be publicly available for 75 years, but now by a federal

judge's order FDA is required to release it at a rate of 55,000 pages a month? Any idea what government information library might be interested in acquiring that data?

from James Jacobs to everyone:
EU is at least 5years ahead of the US in that regard

from Shari Laster to everyone:
Hi Jim, I am not aware of any discussion around this yet. It may be a complex data set to collect depending on the format.

from David Isaak to everyone:
Has any work been made on a content standard for "what" to say about datasets to help give context? (Like RDA or DACS and not MARC or EAD)

from Joshua Olsen to everyone:
Great point about content standards versus the encoding standards. Thanks!

I appreciate all the responses. It is a huge dataset that will take some time to be fully released. Accordingly there would be some complexities associated with acquiring and managing it. Thanks.
