

Start with the Address:

Building Community Profiles with
U.S. Census Data

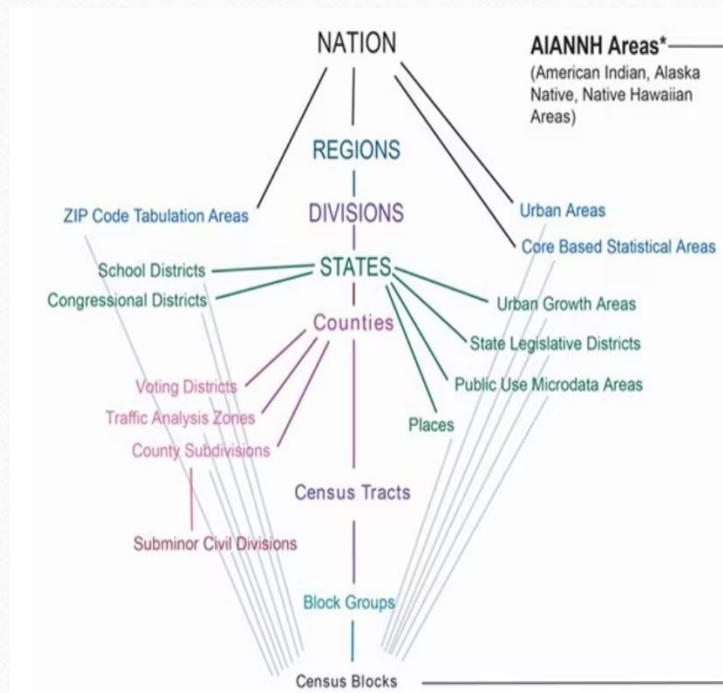

Introduction: Presenter

- Edward Kownslar
 - Head of Public Services
 - Ralph W. Steen Library
 - Stephen F. Austin State University (Nacogdoches, Texas)

Addresses Used For the Workshop

- The searches will use addresses for businesses, public schools or civic government (county and city courthouses).
- No residential addresses will be used in the examples.
- We will focus on census tracts.

Geographic Range for Surveys/Reports

The amount (and type) of data will vary according to the geographic level.

Not every level has the same amount of data (privacy).

The smaller the geographic area, the less detailed data will be available.

Geography: Census Tract (CT)

- Subdivisions of counties
- Population size: 1,200 – 8,000 people
- Average size: 4,000 people
- Boundaries: Legal or visible/geographic features (rivers, major streets)
- Standard geographic area for analysis for communities and neighborhoods

Geography: Census Blocks Group (BG)

- Subgroups/subdivisions of census tracts
- Consist of clusters of blocks
- Numbering: 600 – 3,000 people

Definitions of Geographic Areas

- Census Bureau Glossary: <https://www.census.gov/programs-surveys/geography/about/glossary.html>

Starting Point for Research: Location Address

- Identify a point of interest
 - Commercial property for lease
 - School
 - Property for sale
- Record the street address
- Conduct economic and demographic research about the surrounding area

First Step: Look up the Address:

- Users can no longer search for an address on data.census.gov.
- However, there are several options to find the address on a map.

Option 1 for Addresses: TIGERweb

- The Census Bureau has a separate site to look up addresses and map them:
- <https://tigerweb.geo.census.gov/tigerweb/>
- Authoritative site (source of record)

Option 2: Interactive Data Maps on the Census Bureau Web Site

- 2020 Census Address Count Listing Files Viewer
- 2020 Census Demographic Data Viewer
- <https://www.census.gov/programs-surveys/geography/data/interactive-maps.html>

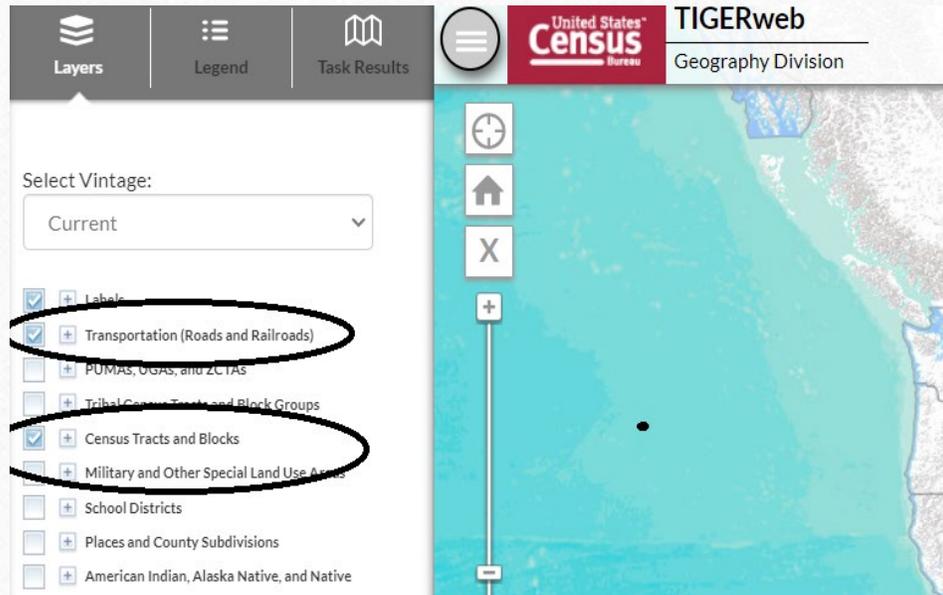

Option 3 for Addresses: Census Reporter

- Web site supported by several organizations, including Northwestern University, Oregon State University, the Knight Foundation, etc.
- Address: <https://censusreporter.org/>
- Not affiliated with the Census Bureau, but it is an authoritative site for Census data and maps
- Very helpful with finding challenging street addresses

Other Issues with Addresses

- If an organization has a physical (street) address and a P.O. box, search for the physical address.
- If you need to use official Census data OR if you need to analyze the data in Excel or CSV-format, record the Census Tract number and then go to data.census.gov.

Finding Addresses: TIGERweb

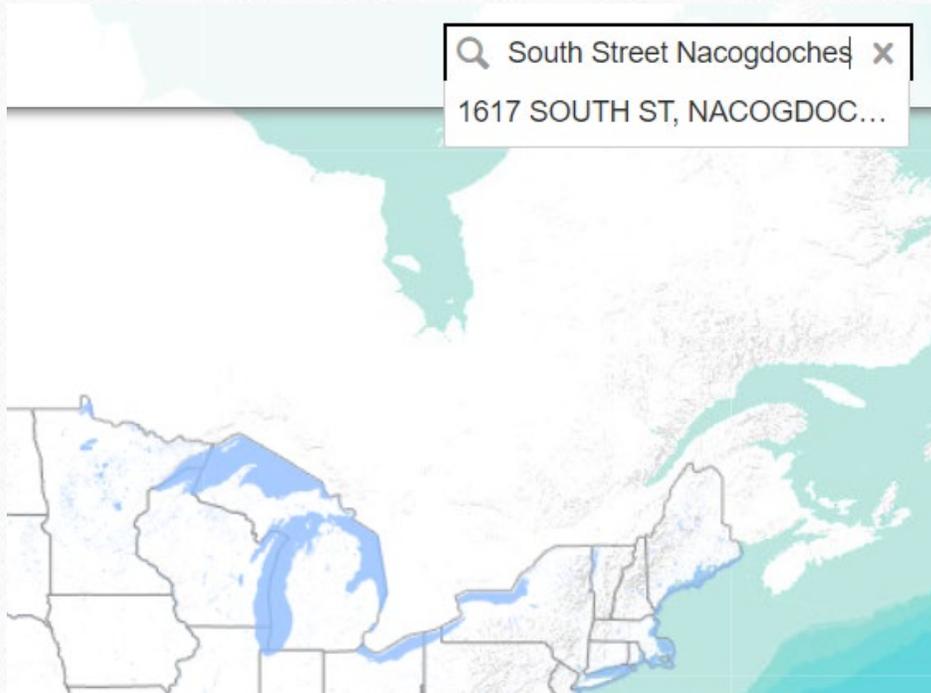

In the “Layers” section, select:
“Transportation”
“Census Tracts and Blocks.”

Building a Community Profile Through An Address

- We would like to learn more about the community in which this business is located:
- 1617 South St., Nacogdoches, TX 75964

Searching TIGERweb For an Address

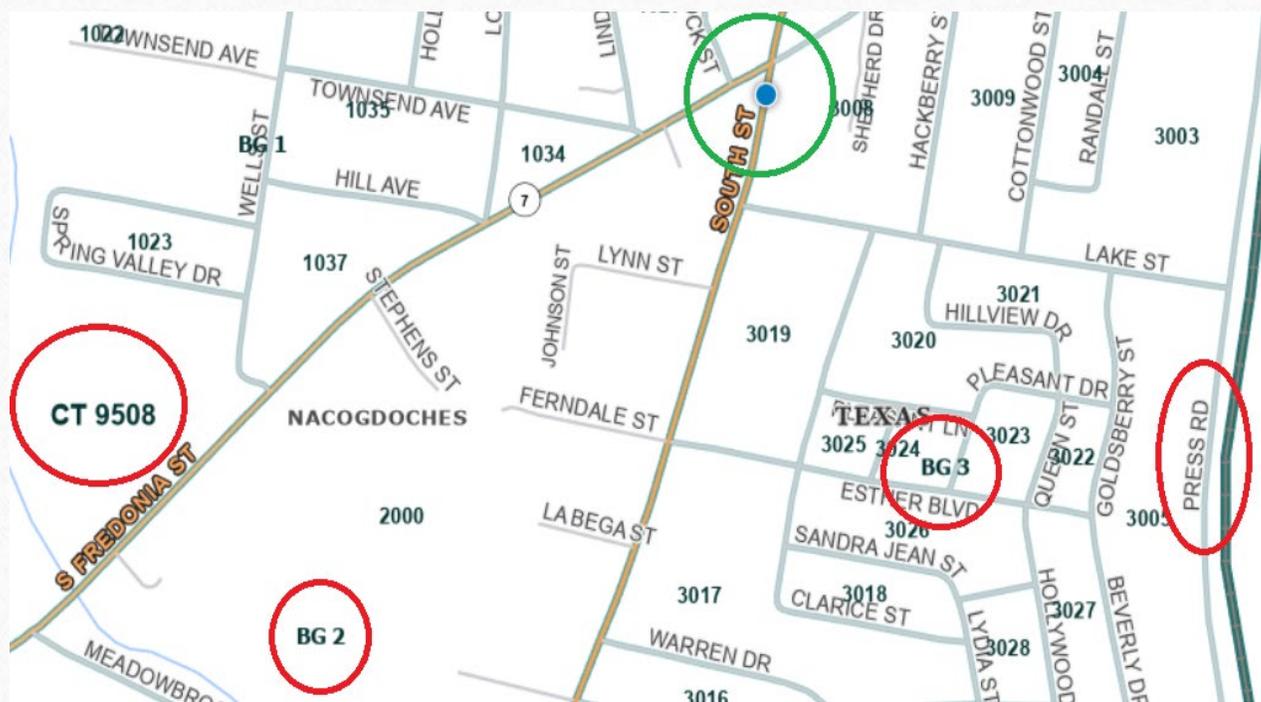

Type in the full mailing/postal address in the search box.

The closest match will appear below the search line.

Select the closest match.

TIGERweb Search: 1617 South Street, Nacogdoches, TX

Business (green circle)
Located in:
CT 9508 (Census Tract)
Between Block Groups 2
and 3
Boundary for CT 9508:
Press Road

Problem Address in TIGERweb: Pineland City Hall

- Address for Pineland City Hall:
- 101 Dogwood St., Pineland, TX 75968

Results from TIGERweb

The screenshot shows a web browser window with the following elements:

- Browser tabs: "LibApps Login @ St...", "PHPSimplex", and "YBP Lib".
- Search bar: Contains the text "101 Dogwood Street" with a magnifying glass icon on the left and a close "X" icon on the right.
- Message box: A white box with a blue border and a blue "OK" button. The text inside reads "tigerweb.geo.census.gov says" followed by "No result found" on the next line.
- Background: A light green map of the United States is visible behind the search bar.

Option 2: Interactive Maps from the Census Bureau Web Site

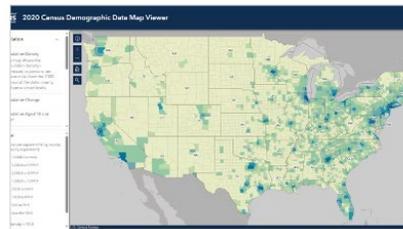

Interactive Maps

Data Visualization: Data-Ink Ratio

- Introduced by Edward Tufte in *The Visual Display of Quantitative Information*.
- All types of visualization: tables, charts, maps, etc.
- Goal: Clean, uncluttered visualization

Data-Ink: Definition

- “The ‘ink’ necessary to show the data in a given chart (which cannot be removed without altering the integrity of the chart.”
- Source: Neil Richards, “Is White Space Always Your Friend?”

Non-Data-Ink: Definition

- “The ‘ink’ used in creating any elements of the chart deemed not absolutely necessary to show the data.”
- Source: Neil Richards

Data-Ink Ratio

- Data-Ink Ratio = Data-Ink / Non-Data-Ink
- The higher the ratio, the better

“Chartjunk”: Tufte

- Elements that are not necessary or distracting
- Richards: Definition is subject/relative
 - Charts need a context or story for the reader to understand the essential point of the data.
 - Some elements might need to be added.
 - Encroach on the data-ink ratio/territory to provide balance
 - Richards: Uses about 90 % of Tufte's principles.

Resources: Data-Ink Ratio
